

Combo Temperature controller+SCR

KDF100-662

User manual

KDF100-662-C1

Please read this manual carefully before operation and keep it for further reference

Main Feature

- 1.KDF100 is an all-in-one temperature controller+SCR unit with heatsink, it's really a ready to use solution for resistive loads, plug in terminals are used for connections, very easy when it comes down to installation RS-485 and power source using the same terminals.
- 2.Built-in display and setting buttons available, the configuration can be carried out even without master device
- 3.Unit can be used as a regular PID controller or just a regular SCR
- 4.Output high/low limits configuration, soft-start function analog output
- 5.Works with all kinds of input, TC/RTD and analog signal covers 0-20mA,4-20mA,0-10Vdc,0-5Vdc,1-5Vdc this is a true universal input controllers, accuracy is 0.2%F.S
- 6.SCR output rated at 380V/220Vac(maximum 440Vac), single phase
AL1 relay output, deviation alarm, absolute value alarm, 12 different alarms modes
AL2 digits output, deviation alarm, absolute value alarm, 12 different alarms modes

Safety Cautions

- 1.SCR is not going to work if there is no load or the load current less than 0.5A
- 2.Large amps are expected on the SCR, terminals needs to be fastened securely, otherwise excessive heat might be accumulated on the terminals result in a damage on the SCR
- 3.SCR must be installed vertically on a strong surface, can not placed anything above or beneath the SCR so the air can flow freely.
- 4.Must make sure the air flow is sufficient enough in the cabinet if you have multiple SCR installed in the same cabinet
- 5.The cabinet with SCR in it must be less than 550C, a cooling fans must be included if the temperature higher than 550C
- 6.The distance between two SCR must be minimum 5CM.
- 7.Please make sure all the configuration and wiring done properly before power on
- 8.A circuit breaker must be installed in the system to protect the SCR unit
- 9.Do not touch the terminals at anytime whatsoever even power was cut off
- 10.Do not attempt to change the fans while the power is still feeding to the SCR
- 11.Please supply the voltage to the SCR within it's ratings
- 12.Please make sure the polarity is correct when input is feed to the SCR

1.Ordering Information

Please generate the ordering code based on your requirements

Model

KDF100-662-□-□-□-□
① ② ③ ④

1. Main function

PID: This device used as a PID+SCR unit

SCR: This device used as SCR unit only

2.Input

Input code	Input type and range
K	K type thermocouple -30 to 1300 °C / -20 to 2360 °F
E	E type thermocouple -30 to 600 °C / -20 to 1100 °F
J	J type thermocouple -30 to 800 °C / -20 to 1460 °F
N	N type thermocouple -30 to 1300 °C / -20 to 2360 °F
W	Wu3_Re25 thermocouple 600 to 2000 °C / 1000 to 3632 °F
S	S type thermocouple 0 to 1600 °C / 0 to 2900 °F
T	T type thermocouple -30 to 400 °C / -20 to 740 °F
R	R type thermocouple 0 to 1700 °C / 0 to 3080 °F
B	B type thermocouple 200 to 1800 °C / 400 to 3260 °F
D	Pt100 -199 to 800 °C / -199 to 1400 °F
V03	0-5VDC -1999 to 9999
V04	0-10DC -1999 to 9999
V08	1-5VDC -1999 to 9999
V09	2-10VDC -1999 to 9999
A02	0-20mA -1999 to 9999
A03	4-20mA -1999 to 9999

3.Current ratings(Actual load should be no more than 80% of ratings)

48A: resistive load 48A(200~440Vac)

60A: resistive load 60A(200~440Vac)

80A: resistive load 80A(200~440Vac)

4. Cooling fans

N: Without fans

F: With fans(24VDC/150mA)

KDF100-662-PID-A03-80A-F

1:PID mode

2:4-20mA input

3:80A load

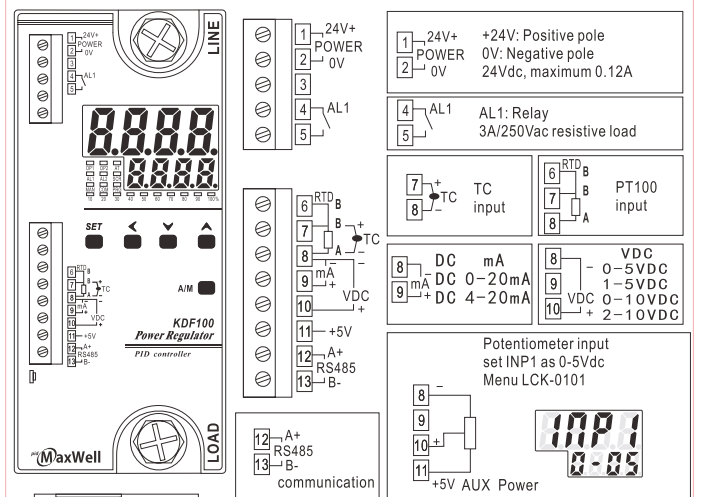

4:with cooling fans

KDF100-662-C1

2. Size and dimension

3.Wiring

Quick connector, FC-2.54-10P needs to be purchased separately

Remark: Independent source must be provided for cooling fans can not use the same source for fans and SCR

Maximum 15 pcs of SCR can be daisy chained, refer to below drawings for reference

Maximum 15 PCS of SCR can be daisy chained must be divided into different groups if the total number of SCR more than 15 pcs

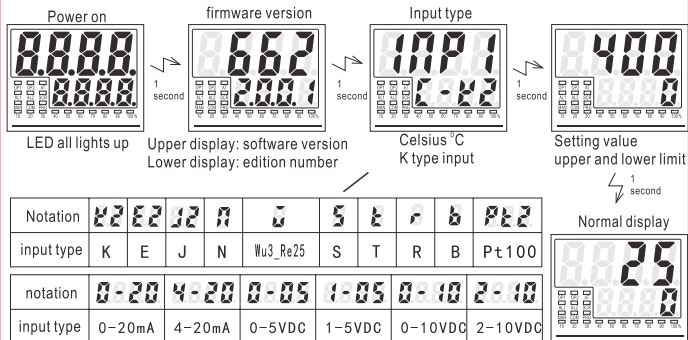

- High frequency device should be placed far away from this device
- Please make sure that there is no unattached metal parts left in the cabinet
- Please make sure input is correctly wired to the SCR otherwise the units might be damaged

4. Panel Description

5. Parameter setting and RS-485 address map

5.1 Power on self-checking and communication

5.1.1 Communication protocol

- (1): Modbus-RTU protocol, support 03H read, 06H&10H read command
- (2): Single drop RS-485 multi-drop communication
 baud rate: 2400,4800,9600,19200 selectable
- (3): data format: 1 start bit+8 data bit(N/O/E) CRC checking+1 stop bit
- (4): Write maximum 20 data and read maximum 37 data
- (5): Factory default address is 1, baud rate is 9600, without CRC checking
- (6): Parameter list and respective address map for RS-485

5.2 Parameter list and respective address (HEX and 10Hex format)

5.2.1 Process value, output value and various indicator

No	Notation	HEX	10HEX	Data format	R/W	Remark
1	Process Value PV	0000H	0	Hex 10Hex	R	TC/RTD input, reading gain 0.1 read 2000 means 200.0 no reading gain when input is analog
2	PID output %	0001H	1	Hex 10Hex	R	Reading gain 0.1 0-1000 means 0.0%-100.0%
3	Various indicator on the panel	0002H	2	Hex Binary	R	bit0: COM , bit1: MAN , bit2: SCR bit3: AL2 , bit4: AL1 , bit5: AT bit6: OP2 , bit7: OP1 Bitx=0 light on =1 light off AL2 is digital output
4	Reserved	0003H	3			
5	Reserved	0004H	4			

5.2.2 Setting value for PID control mode

★ Change the SV from the front plate, for example, change the SV from 0 to 200°C

Remark

- *Press up or down key once, the numbers will increase or decrease by 1 each time, if you keep pressing up or down key, the numbers will go up or down continuously.
- *Press A/M key will save the configuration

No	Notation	HEX	10HEX	Data format	R/W	Remark
6	Setting value for controller data storage type RAM or EEPROM	0005H	5	Hex 10Hex	R/W	TC/RTD input, reading gain 0.1 read 2000 means 200.0 write 1500 means 150.0 no reading gain for analog input
7	Reserved	0006H	6			

Remark

The data storage type is EEPROM, which means the data will inherit after power resume, but there is a limitation on the EEPROM mode, this mode is not appropriate if you need to write different data frequently, if you need to write frequently, please goes to LCK-0101, and change SVS to 0, which is RAM mode. refer to 5.2.7 LCK-0101 number 59 for details

5.2.3 Password Key-in section LCK

5.2.4 Parameter related to communication "LCK-0202" menu

5.2.5 Auto-tuning, alarm and Run/Stop, manual control parameter parameter "LCK-0010"

No	Notation	HEX	10HEX	Data format	R/W	Remark
8	At Auto-Tuning	0007H	7	Hex 10Hex	R/W	Read/write=0: Auto-tuning off Read/write=1: Active auto-tuning Set via front key=No, auto-tuning off Set via front key=Yes, Active auto-tuning
9	AL1 alarm relay output	0008H	8	Hex 10Hex	R/W	TC/RTD input, reading gain 0.1 read 2000 means 200.0 no reading gain when input is analog menu LCK-0101, ALd1=0 or 10, AL1 will be dismissed, AH1 is alarm hysteresis
10	AL2 alarm, digit output	0009H	9	Hex 10Hex	R/W	TC/RTD input, reading gain 0.1 read 2000 means 200.0 no reading gain when input is analog menu LCK-0101, ALd2=0 or 10, AL2 will be dismissed, AH2 is alarm hysteresis
11	Run/Stop, manual control	000AH	10	Hex 10Hex	R/W	Read/write set=0: auto control Read/write set=1: manual control refer to LCK-0202 for manual output % setting No.32, address 001F Read/write set=2, goes to "Stop" Lower display shows "STOP"

Manual control mode

- Man indicator light on if device enter into manual control mode, Lower display shows the output %
- Use the shift key, increment/decrement key to set the output%
- Or you can set the output% via the master device like HMI refer to LCK-0020, NO 32 address 001F

Stop mode

- Lower display shows Stop when device enter into stop mode
- Output goes to 0.0% in stop mode
- Stop mode does not cut off AL1

5.2.6 LCK-0020, PID related parameters

Password key-in interface

NO	Notation	HEX	10 HEX	Data format	R/W	Remark
12	reserved	000BH	11			
13	P1	000CH	12	HEX 10 Hex	R/W	proportional band, range 0.0~400.0 unit is degree, ON/OFF mode when P1=0 HYS1 is hysteresis , refer to No.18 on the manual
14	i1	000DH	13	HEX 10 Hex	R/W	Unit "Second" 0-3600 seconds, factory default=210
15	d1	000EH	14	HEX 10 Hex	R/W	Unit "Second" 0-200 seconds, factory default=30
16	reserved	000FH	15			
17	AtVL	0010H	16	HEX 10 Hex	R/W	Shift the setting value lower for the auto-tuning process to protect the system as the auto-tuning is an ON/OFF process by doing this will protect the system from being damaged, factory default=0.0
18	Cy t1	0011H	17	HEX 10 Hex	R/W	Unit " second", 0-100 second, factory default=0 only applicable when LCK-0303, Ot1=0/1/2 PWM output =0, special output: 5HZ PWM output when ot1=3, phase angled output, CY11 not working, refer to 5.2.8 LCK-0303 for details
19	HYS1	0012H	18	HEX 10 Hex	R/W	When P1=0.0, OP1 switch to ON/OFF control mode HYS1 is hysteresis, PV>SV, OP1 terminated PV<SV-HYS1, OP1 output 100%
